Features List of S-Watch 360 Desk

Introduction

S-Watch 360 Desk is an application designed to provide detailed insights into the devices installed across bank branches. Through its dashboard, users can monitor device performance, track issues, and generate service tickets for timely resolutions.

The system follows a structured hierarchy comprising the Head Office, NBG, Zonal Office, Branch, and System Integrator (SI). Each level has its own dedicated dashboard view, accessible with individual login credentials.

Ticket Generation

To generate a ticket, the System Integrator (SI) must first be assigned with unique login credentials for the respective branch. Once assigned, tickets will appear on the dashboard for monitoring and action.

The SI assignment process is critical and can only be performed by the Head Office:

1. Log in through the Zoho Customer Portal using Head Office credentials.
2. Navigate to the Side Menu and select the Assign SI tab.
3. Assign the appropriate SI for the branch.

Dashboard Features

Ticket Monitoring Widgets:

- Open Tickets
- Today’s Open Tickets
- Today’s Resolved Tickets
- Resolved Tickets
- Escalated Tickets

Automatic Ticket Generation:
If a device encounters an issue (e.g., fault, system-off) and the issue is not resolved within 24 hours, the system automatically generates a service ticket. Tickets are visible to all levels (HO, NBG, Zonal, and Branch).

- Clicking Open Tickets shows all active tickets for a specific branch and its devices.
- Clicking Resolved Tickets displays all closed tickets.

Escalation Process

Tickets follow an escalation process if not resolved in time:

1. After 24 hours of generating a ticket: If unresolved, the ticket escalates to Level 1, and the SI receives a warning email to prioritize resolution.
2. After 48 hours of generating a ticket: If still unresolved, the ticket escalates to Level 2, and a second warning email is sent, urging immediate action.
3. After 72 hours of generating a ticket: If no action is taken, the ticket escalates to Level 3, and the SI receives a final warning email, requiring urgent resolution without further delay.

Report Options

Users can generate a PDF or print the current dashboard view.

Head Office Insights

HO users can view ticket data across NBG-wise, Zone-wise, and Branch-wise levels.
